AI VIDEO BOOTCAMP

Kling AI Cinematic Camera Movement Toolkit

30 Core Techniques + Bonus Combo Movements

How To Use This Toolkit

Each movement has been tested and written in a format that's ready to plug into Kling. Use them as-is or combine them for more advanced sequences.

At the end, you'll also find a bonus section on combo movements — layered camera behaviors for dynamic storytelling.

Let this toolkit be your cinematic compass in the AI frontier. 🚀

IMPORTANT: Always start your prompt with the camera angle and build from there, this way Kling recognizes it immediately. Always create your images in a way that will complement the camera movement you have in mind, if you say 'tracking over the shoulder' but there is no character in your scene, or 'the camera dives underwater' but there is no water nearby, Kling will get confused. Think ahead!

AI Video Bootcamp

30 Core Cinematic Camera Techniques

1. Handheld Camera Movement

Simulates the motion of a camera held by a human. Creates realism, tension, or chaos depending on the context. Great for war, horror, or documentary-style footage.

Prompt example: first-person handheld camera walking through a destroyed city street at sunset, slight camera shake, rubble and fire in the background, cinematic lighting

2. Slow Dolly In

Gradually moves the camera closer to a subject, usually to highlight growing emotional intensity or focus.

Prompt example: cinematic slow dolly in toward a crying soldier sitting alone in the rain, camera begins far and pushes in toward his face, moody lighting

3. Slow Dolly Out

Camera moves away from the subject. Often used to show isolation, departure, or a reveal of the environment.

Prompt example: slow dolly out from a woman standing on a cliff overlooking a vast ocean, hair blowing in the wind, wide cinematic shot

4. Crane Shot Up

Camera starts low and moves up above the subject, revealing the surrounding environment or creating a feeling of transcendence.

Prompt example: crane shot rising above a knight kneeling in prayer on a battlefield, revealing the ruins around him and a blood-red sky

5. Crane Shot Down

Camera descends from above, zooming into the action or focusing attention. Creates a godlike perspective or a sense of destiny.

Prompt example: top-down crane shot slowly descending toward a young girl standing in the center of a glowing ancient rune circle

6. Over-the-Shoulder Shot

Places the camera just behind a character, facing their point of view but keeping their shoulder/head in frame. Great for dialogue or revealing perspective.

Prompt example: over-the-shoulder shot of a warrior watching enemy troops gather in the valley below, shoulder and part of helmet visible in frame, dramatic sunset

7. 360° Orbit Around Subject

Camera circles around a subject to show all angles. Often used to build suspense, power, or awe.

Prompt example: camera slowly orbits around a levitating sorcerer glowing with energy in a dark cave, magical symbols floating in the air

8. Smooth Tracking Behind Character

Follows a character from behind, making the viewer feel like they're walking with them. Great for immersive storytelling.

Prompt example: camera smoothly tracking behind a cloaked traveler walking through a snowy forest, first-person style, ambient wind sounds

9. Slow Pan Right

Camera moves horizontally to the right while remaining in place. Often used to reveal a new environment or transition between subjects.

Prompt example: slow pan right across the rooftops of a medieval city at dawn, smoke rising from chimneys, warm morning light

10. First-Person POV Camera

Mimics what a character sees. Incredibly immersive—feels like you are inside the story.

Prompt example: first-person POV walking into a pyramid chamber lit by torches, dust in the air, echoes of footsteps, ancient hieroglyphs on the walls

11. Top-Down (Bird's Eye) View

A direct overhead shot. Used for abstraction, scale, strategy, or surveillance-style scenes.

Prompt example: top-down view of a battlefield with soldiers clashing, chaos unfolding below, fog creeping across the field

12. Low-Angle Shot

Camera looks up at the subject, making them look powerful, intimidating, or iconic.

Prompt example: low-angle cinematic shot of a giant robot standing in a city square, sunlight flaring behind its head, people running

13. High-Angle Shot

Camera looks down at the subject, making them seem small or vulnerable. Good for emotional distance or dramatic hierarchy.

Prompt example: high-angle shot of a child standing alone in a vast, empty courtyard, snow falling gently

14. Push-In Zoom on Face

Slow movement closer to the face, often used during realizations or emotional shifts.

Prompt example: slow cinematic zoom in on a woman's face as she realizes her lover is gone, tears forming, soft morning light

15. Pull-Out Environmental Reveal

Begins with a close-up and moves backward to reveal the setting or scale. Often used for shocking or emotional reveals.

Prompt example: starts on close-up of warrior's hand gripping a sword, slowly pulls out to reveal he's surrounded by thousands of enemy troops on a foggy battlefield

16. Wide Static Shot with Foreground Movement

Captures the entire environment with a still camera, while something or someone moves across the foreground to add dynamism.

Prompt example: wide static camera watching a samurai walk past in the foreground with cherry blossoms falling gently, distant temple in background

17. Over-the-Head Tracking Shot

Camera tracks directly over a character's head as they walk, following them through a setting.

Prompt example: over-the-head camera tracks a knight walking through castle corridors lit by torches, shadows dancing on the walls

18. Reveal Shot from Behind an Object

Camera peeks from behind an obstacle to reveal something dramatic or important.

Prompt example: camera slowly peeks from behind a tree to reveal a dragon sleeping in a forest clearing, breath fog rising from its nose

19. First-Person Camera Falls to Ground

Creates a disorienting emotional moment, simulating collapse or defeat.

Prompt example: first-person camera falls to the ground during a battlefield scene, vision tilted, blurred, and fading

20. Upward Tilt While Approaching Subject

Begins at feet or lower, tilts up while moving closer—used to reveal majesty or scale.

Prompt example: camera tilts upward while moving toward a glowing crystal monolith, shadows flickering on cavern walls

21. Camera Moves Through Object (Portals, Windows)

Passes through a physical object to enter a new scene or perspective. Feels magical or cinematic.

Prompt example: camera passes through a mirror and into a fantasy world, transitioning from a bedroom into a floating castle

22. Camera Follows Character Turning a Corner

Adds continuity and flow. Makes the viewer feel like they're exploring a space with the character.

Prompt example: camera follows a thief sneaking through an alley and turning a corner, rain-soaked pavement, flickering neon lights

23. Medium Tracking Shot Alongside Character

Camera moves sideways alongside the subject at a medium distance, showing motion while keeping focus on the character.

Prompt example: medium tracking shot moving parallel to a woman running through the desert in slow motion, sand kicking up behind her

24. Slow Descend Behind Subject from Above

Camera slowly drops behind a character, settling in to track them. Feels cinematic and immersive.

Prompt example: camera descends from above behind a spaceship pilot walking toward their ship in a hangar, sparks flying from welding droids

25. Time-Lapse Pull-Out

A retreating camera paired with a time-lapse (sun rising, shadows shifting, crowds moving). Feels magical or epic.

Prompt example: camera slowly pulling back from a mountaintop temple as the sun rises and clouds roll over the peaks in fast motion

26. Push Through Fog or Mist

Adds atmosphere and mystery. The subject is slowly revealed as the camera penetrates a hazy layer.

Prompt example: camera slowly pushes through thick jungle mist to reveal an ancient stone statue covered in vines

27. Spiral Around Object on Ground

Camera moves in a circular motion around a small item on the ground. Creates focus and reverence.

Prompt example: spiral camera around a glowing magical amulet lying on cracked stone, ancient runes pulsing with light

28. Reverse Tracking (Walking Toward Camera)

Camera moves backward while a character walks toward it, maintaining emotional focus and pacing.

Prompt example: reverse tracking shot of a man walking slowly through a hallway of flickering lights, eyes locked on the camera

29. Tracking Shot with Foreground Obstructions

Camera follows subject, occasionally interrupted by objects in the foreground. Adds realism and depth.

Prompt example: tracking shot behind a woman walking through a marketplace with people, tents, and fabrics occasionally passing in front of the lens

30. Rising Reveal from Behind Subject's Shoulder

Camera starts low and behind, then rises and tilts up to reveal what the character is looking at.

Prompt example: camera slowly rises behind a cloaked figure standing at the edge of a cliff, revealing a massive futuristic city below

🎯 Niche Camera Movements (For Advanced Cinematic Scenes)

🎥 1. Camera Dives Underwater

Simulates submerging beneath the surface. Great for transformation, discovery, or dreamlike sequences.

Prompt Example: camera slowly descends from above the ocean surface into the deep blue water, bubbles rising, sunlight fading, sea creatures gliding past

🎥 2. Camera Follows Character Into Water

A tracking shot that follows a person as they enter water, maintaining immersion. Used for transformation, rebirth, escape.

Prompt Example: camera follows a warrior walking into a sacred lake, then continues following as they disappear beneath the water's surface, ripples and light refraction surrounding them

🎥 3. Camera Passes Through Fire or Smoke

Transitions the viewer through intense elements, often symbolizing chaos, memory, or emergence.

Prompt Example: camera slowly moves forward through thick smoke and burning debris, revealing a lone firefighter standing in the aftermath of an explosion

🎥 4. Camera Moves Through a Mirror or Portal

Used for magical or sci-fi transitions, creating a boundary-crossing effect.

Prompt Example: camera passes directly through a floating mirror in the forest, entering a glowing realm filled with floating rocks and golden light

🎥 5. Camera Surfaces From Underwater

The reverse of a dive — often used for rebirth, realization, or escape. Great transition into a new tone or space.

Prompt Example: camera emerges from beneath murky lake water into a mist-covered landscape, droplets clinging to the lens, revealing a ruined castle in the distance

🎥 6. Camera Falls From the Sky

Simulates a rapid fall through clouds, wind, and atmosphere. Great for dreams, impact, or arrival scenes.

Prompt Example: camera plummets from the clouds above, spinning and falling toward a burning battlefield below, wind roaring past the lens

🔁 COMBO MOVEMENTS — Cinematic Layering (Bonus Section)

These combos combine two or more camera movements for richer storytelling. You can experiment with any combos you like!

🎥 Combo 1: Push-In + Tilt Up

What it does: Builds emotional intensity and grandeur simultaneously.

Prompt Example: camera pushes in and tilts up toward a queen standing on palace stairs as golden banners flow behind her, epic fantasy tone

🎥 Combo 2: Crane Down + Orbit

What it does: Sweeping cinematic entrance that circles as it descends. Feels mythic or divine.

Prompt Example: camera cranes down and slowly orbits around a warrior standing on a battlefield surrounded by fallen enemies and lightning in the sky

🎥 Combo 3: First-Person + Handheld + Sudden Fall

What it does: Fully immersive, chaotic storytelling, great for battle or collapse.

Prompt Example: first-person handheld camera running through a collapsing cave, shaking violently, then falling to the ground as debris crashes down

🎥 Combo 4: Track Behind + Push-In Reveal

What it does: Follows the subject then shifts to emphasize emotion or reveal something shocking.

Prompt Example: camera tracks behind a girl walking through a cornfield, then pushes in as she turns and sees a UFO hovering in the sky
